2016 - 2021

Fuel Labs Aug 2021 - May 2023
Compiler Engineer - Rust
Designed and implemented a compiler for the Sway smart contract programming language, focusing on friendly interactivity with developers. Built tools to integrate with the FuelVM and the Fuel ecosystem.

Madison, WI

Google May 2021 – Aug 2021
Software Engineering Intern
Implemented load balancing in a library meant to interface with the network card and perform RPC-like operations using RMA, achieved by integrating two existing early-development libraries together. Contributed to app design on a Google 2023 project.

Langley, VA

National Aeronautics and Space Administration (NASA) June 2017 – Aug 2017
NASA Internships, Fellowships, and Scholarships (NIFS) Intern
Contributed to the NASA Safeguard autonomous drone geofencing project. Designed and implemented system for on-board flight control of GPS devices. Refactored code from previous NASA flight missions to meet current mission standards.

Billerica, MA

General Electric (GE), Oil & Gas June 2016 – Aug 2016
Information Technology Leadership Program (ITLP) Intern
Created asset tracking system for shop floor using RFID, Bluetooth LE, and Raspberry Pi. Worked with the SAP enterprise resource management software to automate EHSM compliance checks.

Education

The University of Massachusetts Amherst
MS in Computer Science

Amherst, MA
2021

Trinity University
BS in Computer Science

San Antonio, TX
2018

Atelier de Sevres
Art & Design Intensive

Paris, France
